

Pablo Bengoechea

Web Developer & Data Engineer

/summary

Backend developer with a background in web development and project-based learning. Skilled in front-end, back-end, and database management. Passionate about problem-solving and building scalable applications.

/work experience

Fullstack developer

ROSYNET

2022-2025

Fullstack developer with experience in front-end, back-end, and PLC integration. Worked on various projects at ROSYNET, focusing on developing scalable applications and implementing solutions for both web and industrial systems.

/education

Higher Technician in Web Development

Universidad CEU San Pablo

2020-2022

Acquired skills in fullstack development, focusing on front-end and back-end technologies, database management, and web application design.

Software Engineer

42 School

2022-2024

Gained solid experience in software engineering with a focus on C and C++. Developed web servers, Docker containers, and a custom minishell, applying system calls, process management, and networking concepts. Strengthened skills in system design, algorithms, and collaborative coding through project-based learning.

Bachelor of Engineering, Machine Learning and Data Engineering

University Lapland

2025

Practice-oriented degree focused on AI, machine learning, and data engineering, with hands-on experience in real-world projects. Skills in building machine learning models, data processing and analysis, and developing data-driven solutions using modern AI tools.
